

SOUTH COAST CACTUS AND SUCCULENT SOCIETY NEWSLETTER

NUMBER 12

DECEMBER, 2009

President's Message

HAPPY HOLIDAYS TO YOU!

Best wishes for the coming holidays. I hope to see you all at our December Holiday party. We have a large number of new members, and as in the past, Long Beach Club members have been invited. Please seek them out and extend them a warm welcome.

As usual, the entrées will be Prime Rib and a Honey-Baked ham. The club will provide paper plates, cups and plastic utensils. We will also provide (tap) water, coffee and tea. If you want something else to drink – bring it, but remember alcohol is not permitted.

Every member/family is encouraged to bring a potluck dish for 6-8 people. It can be a salad, side-dish or dessert. Please bring your dishes before 11:45 – or earlier if they must be heated.

It would be helpful if a few folks showed up about 11:00 to help set up the room. It is possible the tables will need to be cleaned – especially if someone used the room on Saturday. Table coverings will be provided by Rose Arbuckle. Seating will be on both sides of the tables to making chatting easier and conserve space.

I'll try to start the meeting at noon and after a few words of welcome we'll start the buffet line.

After we finish eating . . .

The "Annual Plant" contest will be held. Remember to bring your "Annual Plant" which was *Avonea alstonii* – dead or alive - to be judged. South Coast and Long Beach club entries will be judged separately, (even though I think we have the same specie). Mini-show winners will be announced and prize and surprise plants will be awarded.

If you want to participate in the gift exchange bring a wrapped gift suitable for a plant hobbyist in the \$10-15 range.

Before we adjourn, the current club Officers will be re-installed. I wish to thank them all for their efforts this past year in support of our wonderful club and willingness to serve another year.

After we adjourn, I hope everyone will pitch-in to help with clean up.

Hope to see ya'll there.

Dale

SCC&SS OFFICERS: President: Dale LaForest (310)618-9886, 1st V. Pres.: Hank Warzybok, (562) 429-7110; 2nd v. HOLIDAY CACTI

The holiday cacti are grown mostly for their beautiful winter flowers. The original "Christmas Cactus" is a hybrid between *Schlumbergera russelliana* and what used to be known as *Zygocactus truncatus*. (You still see the name "Zygocactus" on plants in the garden shops.) This later species has since been transferred to *Schlumbergera*, and is now *S. truncata*. The "Zygocacti" are characterized by having teeth on the edges of the stem segments, giving rise to the common name "Crab Cactus" (also called "Thanksgiving Cactus" --by American growers--for its late November/early December bloom period.) The "Christmas Cactus" has smoother, more scalloped stem segments. The areoles, which all cacti have, are situated in the scallops along the edges of the stems.

This hybrid is technically known as *Schlumbergera xbuckleyi*. A number of hybrids have been developed, exhibiting many shades of white, pink, lilac, red, orange, and yellow. The flowers range from zygomorphic (irregular) in the "Zygocacti", to regular in the hybrids more related to *S. russelliana*.

The seven, or so, species of *Schlumbergera* are native to the coastal ranges of Brazil, where they grow as epiphytes--on trees and rocks.

The holiday cacti tend to have their heaviest bloom around the holiday for which they are named--though healthy plants may bloom two or three times a year. There is a lot of "mythology" regarding getting these plants to flower:

- 1) The optimum temperature for setting buds is 50-60 degrees. Any higher or lower minimum temps tend to retard bud development.
- 2) Fertilize with a low nitrogen, high potassium formulation when the buds form, in order to bring about larger and more long-lasting flowers.
- 3) Giving them the 'short day' treatment can make them bloom earlier.

Once buds do form, they can abort if the plant is moved, so leave it where it is.

Another holiday cactus is the "Easter Cactus". These plants have smooth stem edges like the Christmas cactus, but have a number of hair-like spines at the tips of each segment and have radially symmetrical flowers. These belong to the genus *Rhipsalidopsis*.

The pink-flowered *R. rosea* is smaller in both growth habit and flower size than the red-flowered *R. gaertneri*. Recently some strikingly beautiful hybrids of this group have become available.

These are all pendant, epiphytic cacti which grow in semi-shade. They will do well in any standard cactus mix, but the addition of extra organic material (either humus or leaf mold) is appreciated as long as the soil remains well-drained. They will tolerate severe underpotting. The jungle cacti and so appreciate higher humidity than their desert cousins. They should not be allowed to go completely dry between waterings, and can be liberally watered when they are actively growing or in bud. They will tolerate winter minimum temps below 50 degrees, but prefer more warmth.

Some growers have a problem with their Christmas cacti, when they seem to dry up. Dick Kohlschreiber, writing in the newsletter of the South Bay Epiphyllum Society, addresses this problem: "What do you do if your plant starts withering?" If this occurs right after they bloom, I wouldn't worry about it too much. It's probably due to the stress of blooming. If the plant has not bloomed and it's withering, it does not necessarily indicate that the plant is too dry. So don't water it unless you check for sure that it needs water. Withering often indicates some type of root problem. On the withered plants I've had, 9 out of 10 of them are too wet. If you want to try to save a withered plant, cut back on the watering and put the plant in a cool shaded place. Make cuttings in case the plant doesn't survive. Other signs to watch for are roots forming at each joint. Sometimes if the foliage turns red, it's a sign that the plant is stressed. If your buds drop off or segments fall off the plant, it may be due to low humidity or sudden changes in temperatures."

(Epi-Gram, Dec. 1992)
